

# Easy Way to Share Smart Phone Videos

Following the 10 steps below:

**Step 1:** Record your video on your iPhone as you normally would.  
[VERY IMPORTANT] Always record with your phone horizontally, NOT vertically. This is a very important trick for any video (family, personal, business, etc.) that's shot with a mobile device. Videos shot vertically will have wide black spaces on each side of the video when you play them back on a computer or television.

**Step 2:** Download the "YouTube Capture" App

**Step 3:** Open the App and sign in

**Step 4:** View the introduction slides

**Step 5:** Press the "All Videos" button 

**Step 6:** Choose the video you want to upload

**Step 7:** Edit the video (if needed) and click the arrow in the right-hand corner to proceed

**Step 8:** Name the video "Bill Smith Invite" or "John Henry Thank You" for example

**Step 9:** [VERY IMPORTANT] On the top left of your keyboard there is a red icon that says "Public" next to it. You must click that and change it to "Unlisted." You do not want these videos available to the general public or available through searching. That is why it's best to keep them "Unlisted," which means only people that have the URL address can watch the video.

**Step 10:** Press the "Upload link"

Once the video is done uploading, click on it and on the next window a "link" will appear. Click on the arrow to the left. Press "Email" and then you can either send the link directly to your prospect or customer OR you can just email it to yourself for now and email it to the prospect or client later.
